The context

The creation of multidisciplinary teams is becoming increasingly popular and needed in hospitals, in order to allow all the specialists involved in the care process to define customised and more targeted clinical pathways for each single patient.

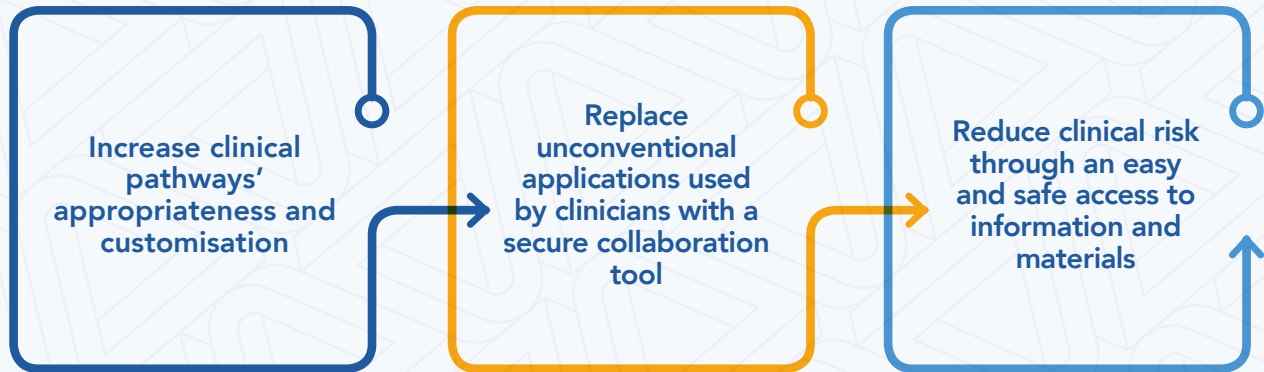

Currently, multidisciplinary meetings often turn out to be time wasting and largely ineffective due to poor planning and low availability of updated and complete information. These meetings are regularly postponed with detrimental effects on everyone's time, patience and costs as well as having a direct impact on the quality of patient care.

In an increasingly interconnected world, it's very important that health data and sensitive patient information is shared between all the healthcare professionals – in a way that guarantees data security and patient privacy. At present, however, due to the lack of corporate tools, professionals' resort to using every-day instant messaging applications – which puts patient privacy seriously at risk. Dedalus' multidisciplinary collaboration models ensure data security and aid fast set up of timely meetings with all key personnel – with all relevant data, images and previous reports to hand.

Information sharing through unconventional tools

Challenges

Needs

Have powerful functions for meetings' management

Provide advanced and user-friendly tools for sharing clinical documents and reports

Simplify the meeting scheduling and the cooperation between clinicians

Ensure the tracking of the activities carried out by clinicians during multidisciplinary meetings, for legal and financial purposes

The solution

C4C Meeting by Dedalus Group is the new multidisciplinary collaboration tool which allows communication, information sharing and activities planning between the various professionals involved in the care process. Compliant with privacy regulations on sensitive data, C4C Meeting simplifies the creation of virtual multidisciplinary medical working groups, providing operators and specialists with an easy and secure access to patient's information, documents and reports and supplying reporting tools for each online meeting organised.

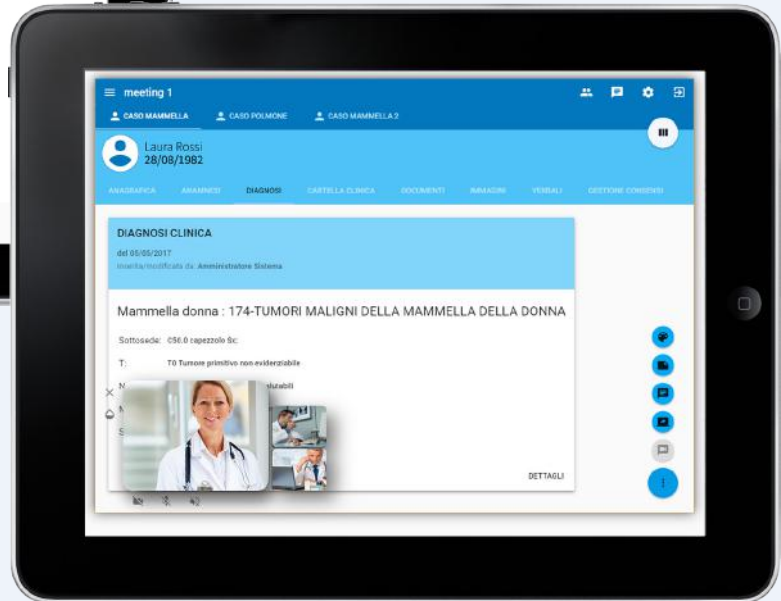

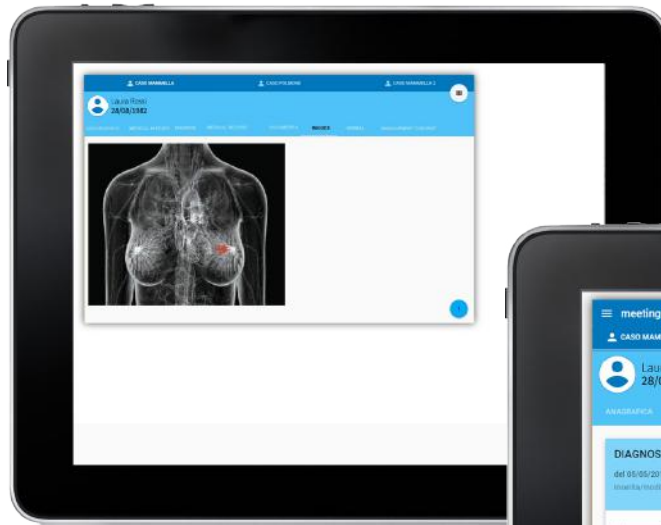

C4C Meeting can also be integrated with the most popular digital imaging platforms to provide specialists with the details necessary for patient's care, allowing clinicians to add notes and drawings, and modify and save images.

ACCESS TO CLINICAL REPOSITORY
INTEGRATION WITH DIGITAL IMAGING PLATFORMS
